DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 4-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Correia et al in view of Coulson.

Correia et al (col. 3, lines 64+) teach the claimed casting method and ceramic core for producing a hollow airfoil investment-cast article such as a turbine nozzle 11 by using internal ceramic core 128, shaping a temporary wax form 114 having wax flash ribs 126B at the free end 132 of the core, and external shell 130 and pouring of molten metal into a space created by

removal of wax form. Correia et al fail to teach the use of internal ceramic core with datum pad and method

However, Coulson (col. 1, lines 47+) teaches the use of datum pad (plastic identification tag 30) and method for the purpose of effectively providing datum pad on a ceramic core for use in casting molten metallic materials having corresponding data (cast geometric features) corresponding to the datum pad on the core. It would have been obvious to one having ordinary skill in the art to provide Correia et al the use of datum pad (plastic identification tag 30) and method as taught by Coulson in order to effectively provide datum pad on the temporary wax flash ribs 126B at the free end 132 of the internal ceramic core for use in casting molten metallic materials having corresponding data (cast geometric features) corresponding to the pad on the core.

Response to Arguments

4. Applicant's arguments filed 1/12/06 have been fully considered but they are not persuasive. Applicant's arguments do not comply with 37 CFR 1.111(c) because they do not clearly point out the patentable novelty which he or she thinks the claims present in view of the state of the art disclosed by the references cited or the objections made. Further, they do not show how the amendments avoid such references or objections because the plastic identification tag 30 of Correia et al is interpreted as the claimed datum pad.

Conclusion

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 1725

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
